

We recommend new and older TOCCO, Ajax, Ajax Tocco, or American Induction Power Supplies to be calibrated yearly to remain certified.

Do your meters need calibrated to meet the new TS-16949 standards? If your power supplies have not been calibrated since they were new, this could affect your certification process. The Meter Calibration Service will recalibrate your meters to return them to "original factory specifications". Our Engineers use instruments to calibrate that are traceable to NIST. Having your meters calibrated and "certified by an Ajax Tocco Service Engineer can help you with ISO certification.

The Ajax Tocco Service Department offers a full line of services to our customers. These services include our Customer Care Program, Infrared Imaging, Power Supply Training Schools, and much more!
